

WHAT IS CLAIMED IS:

1. A silver halide color photosensitive material having, on a support, a unit blue-sensitive silver halide emulsion layer, a unit green-sensitive silver halide emulsion layer and a unit red-sensitive silver halide emulsion layer, each comprising two or more light-sensitive layers having the same color sensitivity but differing in speed to each other,

wherein the silver halide color photosensitive material containing at least one compound represented by the following general formula (I) or general formula (II); and

wherein at least one of the light-sensitive layers containing silver halide grains in which tabular grains each having an aspect ratio of 5.0 or more account for 60% or more of the total projected area of the silver halide grains:

(I)

(II)

wherein R_1 represents a substituent capable of bonding to a naphthalene ring; n represents an integer

of 0 to 6, provided that when n is 2 or more; R₁s may be the same or different; R₂ represents an alkyl group or aryl group, provided that R₁ and R₂ may be bonded to each other to form a ring; R₃s represent m independent substituents bonding to an aryloxy ring which are selected so that the sum of their Hammett substituent constants σ_p may be 0.1 or more, provided that R₃ may be bonded to R₅ to form a ring, m represents an integer of 1 to 3, provided that when m is 2 or 3, R₃s may be the same or different; R₄ and R₅ independently represent a hydrogen atom, alkyl group (including cycloalkyl), alkenyl group (including cycloalkenyl), alkynyl group or aryl group; and INH represents a residue of a mercaptotetrazole derivative, mercaptotriazole derivative, mercaptothiadiazole derivative, mercaptooxadiazole derivative, mercaptothiazole derivative, mercaptooxazole derivative, mercaptoimidazole derivative, mercaptobenzimidazole derivative, mercaptobenzothiazole derivative, mercaptobenzoxazole derivative, tetrazole derivative, 1,2,3-triazole derivative, 1,2,4-triazole derivative or benzotriazole derivative.

2. The silver halide color photosensitive material according to claim 1, wherein the silver halide tabular grains accounting for 60% or more of the total projected area of the silver halide grains each having an aspect ratio of 8.0 or more.

3. The silver halide color photosensitive material according to claim 1, wherein the tabular silver halide grains each having at least ten dislocation lines per grain.

5 4. The silver halide color photosensitive material according to claim 2, wherein the tabular silver halide grains each having at least ten dislocation lines per grain.

10 5. The silver halide color photosensitive material according to claim 1, wherein an emulsion contained in at least one light-sensitive emulsion layer in the silver halide color photosensitive material comprising tabular grains

15 each having a (111) face as a main plane, and each meeting a relationship:

$$I_2/I_1 < 1$$

 wherein I_1 represents a silver iodide content (mol%) of an outermost surface layer in a main plane region and I_2 represents a silver iodide
20 content (mol%) of an outermost surface layer in a side face region,
in an amount of 50% or more of the total projected area of all the silver halide grains contained in the emulsion.

25 6. The silver halide color photosensitive material according to claim 2, wherein an emulsion contained in at least one light-sensitive emulsion

layer in the silver halide color photosensitive material comprising tabular grains

each having a (111) face as a main plane, and each meeting a relationship:

5
$$I_2/I_1 < 1$$

wherein I_1 represents a silver iodide content (mol%) of an outermost surface layer in a main plane region and I_2 represents a silver iodide content (mol%) of an outermost surface layer in a side face region,

10 in an amount of 50% or more of the total projected area of all the silver halide grains contained in the emulsion.

7. The silver halide color photosensitive material according to claim 3, wherein an emulsion contained in at least one light-sensitive emulsion layer in the silver halide color photosensitive material comprising tabular grains

15 each having a (111) face as a main plane, and each meeting a relationship:

20
$$I_2/I_1 < 1$$

wherein I_1 represents a silver iodide content (mol%) of an outermost surface layer in a main plane region and I_2 represents a silver iodide content (mol%) of an outermost surface layer in a side face region,

25 in an amount of 50% or more of the total projected area

of all the silver halide grains contained in the emulsion.

8. The silver halide color photosensitive material according to claim 4, wherein an emulsion
5 contained in at least one light-sensitive emulsion layer in the silver halide color photosensitive material comprising tabular grains

each having a (111) face as a main plane, and each meeting a relationship:

10
$$I_2/I_1 < 1$$

wherein I_1 represents a silver iodide content (mol%) of an outermost surface layer in a main plane region and I_2 represents a silver iodide content (mol%) of an outermost surface layer in a
15 side face region,

in an amount of 50% or more of the total projected area of all the silver halide grains contained in the emulsion.

9. The silver halide color photosensitive
20 material according to claim 1, wherein the silver halide color photosensitive material having an ISO speed of 640 or more.

10. The silver halide color photosensitive material according to claim 2, wherein the silver
25 halide color photosensitive material having an ISO speed of 640 or more.

11. The silver halide color photosensitive

material according to claim 3, wherein the silver halide color photosensitive material having an ISO speed of 640 or more.

12. The silver halide color photosensitive
5 material according to claim 4, wherein the silver halide color photosensitive material having an ISO speed of 640 or more.

13. The silver halide color photosensitive
material according to claim 5, wherein the silver
10 halide color photosensitive material having an ISO speed of 640 or more.

14. The silver halide color photosensitive
material according to claim 6, wherein the silver
halide color photosensitive material having an ISO
15 speed of 640 or more.

15. The silver halide color photosensitive
material according to claim 7, wherein the silver
halide color photosensitive material having an ISO
speed of 640 or more.

20 16. The silver halide color photosensitive
material according to claim 8, wherein the silver
halide color photosensitive material having an ISO
speed of 640 or more.
